The Innovative Medicines Initiative and the PROTECT project

EudraVigilance Information Day
EMA, 22 June 2010

Presented by: Xavier Kurz
Content

- The Innovative Medicines Initiative
- The PROTECT project
- Progress of scientific work as of 14 April 2010
The Innovative Medicines Initiative (IMI)

IMI's overall goal is to reinvigorate the biopharmaceutical sector in Europe

To address these challenges, “IMI will harness the know-how and expertise available across Europe's biopharmaceutical sector, by pooling competencies and resources from the public and the private domain”.

Four domains of research:

- Predictive safety
- Predictive efficacy
- Knowledge management
- Education & training
IMI funding programme

2 Billion EURO

1 Billion Euro
Public Partnership

1 Billion Euro
Private Partnership
IMI Strategic Research Agenda

Identifies pre-competitive bottlenecks in the R&D process

Proposes recommendations to address these bottlenecks

Proposes a new model of Public-Private collaborations to implement these recommendations

For each topic: currently three-step process

• Competition between public consortia based on Expression of interest

• Merge between winning consortium and EFPIA consortium to develop the Full Proposal

• Full proposal is re-assessed by external experts
IMI: Ongoing projects

1st Call

- 15 projects, 395 teams, total budget of 281 M€
- Drug Safety (4), NeuroSciences (3), Training (4), Diabetes & Lung Diseases (4)
- EMA involvement:
  - Consortium leader (1)
  - Consortium member (1)
  - Advisory Board member (4)
IMI: Ongoing projects

2nd Call

- Knowledge management, Cancer Biomarkers, Rapid diagnosis of infections, Inflammatory disorders
- 124 Expressions of interest, 1,118 Applicants
- 25 EU Member States (all MS except Malta and Latvia)
- 7 FP7 Associated countries (Albania, Bosnia, Israel, Norway, Serbia, Switzerland, Turkey)
- 7 FP7 Third countries (Canada, China, Russia, Senegal, Ukraine, United-States)
IMI: Indicative call topics for 3rd call (2010)

- New in vitro assays and in vivo models for improved prediction of Drug Induced Liver Injury (DILI) in man.
- Novel biomarkers and models for cardiovascular safety.
- Immunogenicity: clinical relevance and risk minimisation of antibodies to biopharmaceuticals.
- Immunosafety of vaccines: new biomarkers associated with adverse events (early inflammation and autoimmune disease) and epidemiology.
- Improving the scientific and preclinical models and tools for tuberculosis medicines research.
- Functional MRI application in CNS drug development for better patient characterisation in neurogenerative diseases like AD, MS, PD.
- Translational endpoints in autism, incl. establishment of a network of clinical centres of excellence.
- Personalised medicine in diabetes treatment.
- Training programs for the informed patient, incl. establishment of a pan-European industry-patient organisation network.
PROTECT Goal

To strengthen the monitoring of benefit-risk of medicines in Europe by developing innovative methods

to enhance early detection and assessment of adverse drug reactions from different data sources (clinical trials, spontaneous reporting and observational studies)

to enable the integration and presentation of data on benefits and risks

These methods will be tested in real-life situations.
Partners

Public

Regulators:
- EMA (Co-ordinator)
- DKMA (DK)
- AEMPS (ES)
- MHRA (UK)

Academic Institutions:
- University of Munich
- FICF (Barcelona)
- INSERM (Paris)
- Mario Negri Institute (Milan)
- University of Groningen
- University of Utrecht
- Imperial College London
- University of Newcastle Upon Tyne

Private

- GSK (Deputy Co-ordinator)
- Sanofi- Aventis
- Roche
- Novartis
- Pfizer
- Amgen
- Genzyme
- Merck Serono
- Bayer Schering
- Astra Zeneca
- Lundbeck
- NovoNordisk

Others:
- WHO UMC
- GPRD
- IAPO
- CEIFE

SMEs:
- Outcome Europe
- PGRx

Data collection from consumers – WP4

Clinical trials
- Observational studies
- Electronic health records
- Spontaneous ADR reports

Risks

Signal detection WP3
Signal evaluation WP2

Benefits

Benefit-risk integration and representation – WP5

Validation studies WP6
Training and education WP7
Milestones

EAB/SC Kick-off meeting: 1+2 Oct 2009

Release of Partners’ forum: 13 Oct 2009

Publication Policy & Process to handle safety concerns adopted by SC: 16 March 2010

Start date: 1 Sep 2009

WP 2-7 Kick-off meetings: Sept - Oct 2009

Signature of the Grant Agreement: 11 Feb 2010

Month 7: 1 March 2010

1st half-year report adopted by SC: 4 May 2010
Work Package 2

Objectives:

To:
- Develop
- Test
- Disseminate

methodological standards for the:
- Design
- Conduct
- Analysis

of pharmacoepidemiological studies applicable to:
- different safety issues
- using different data sources
Work Package 2: Work plan

Three Working Groups

- WG 1: Databases
- WG 2: Confounding
- WG 3: Drug Utilisation
Work Package 2: WG 1 plan - Databases

WG 1 plan

- Conduct of 5 Adverse Event-Drug pair studies in different EU databases
  - Selection of 5 key AE-drug pairs
  - Identification of key characteristics of databases
  - Development of study protocols for all 5 AE-drug pairs
  - Compare results of studies
Selection of 5 Key AEs and drugs

• Selection criteria:
  - AEs that caused regulatory decisions
  - Public health impact (seriousness of the event, prevalence of drug exposure, etiologic fraction)
  - Feasibility
  - Range of relevant methodological issues
Work Package 2: WG 1 progress status

Selection of 5 Key AEs and drugs

- Initial list of 55 events and >55 drugs
- Finalisation based on literature review and consensus meeting

Work Package 2: WG 2 plan - Confounding

Objective

• To evaluate and improve innovative methods to control confounding

Method

• Creation of simulated cohorts
• Use of methods to adjust for observed and unobserved confounding
  - e.g. time-dependent exposure, propensity scores, instrumental variables, PERR adjustment
Work Package 2: WG 3 plan - Drug Utilisation

WG 3 plan

• Use of national drug utilisation data
• Inventory of data sources on drug utilization data for several European countries.
  – To describe and update the main characteristics of multinational European working groups on drug utilisation monitoring and research
  – Explore use of IMS data by companies
• Evaluation and dissemination of methodologies for drug utilisation studies in order to estimate the potential public health impact of ADRs
Work Package 3

**Objective:**
To assess existing methods, and develop new ones, for signal detection from spontaneous reports, electronic health records and clinical trials.

**Scope**

- To develop new methods for signal detection
- To implement and examine the value of screening methods in electronic health records
- To provide advice on good signal detection
Work Package 3: Sub-projects

1. Merits of disproportionality analysis
2. Structured database of known ADRs
3. Risk estimates from trials
4. Signal detection recommendations
5. Better use of existing ADR terminologies
6. Novel tools for grouping ADRs
7. Other information to enhance signal detection
8. Signal detection based on SUSARs
9. Subgroups and risk factors
10. Signal detection in Electronic Health Records
11. Drug-drug interaction detection
12. Duplicate detection
Work Package 3: Progress status

1. Merits of disproportionality analysis

- Development of protocols to demonstrate the value of existing or new methods for signal detection in prospective and retrospective testing

2. Structure database of known ADRs

Aim:

- to establish a *structured* format of already known ADRs to:
  - triage out known ADRs
  - reduce masking effects

Achievement (14/04/10):

- **212** (out of 355 centrally-authorised products) products completed
- List of 850 groups of closely related MedDRA terms shared by GSK
- Free text extraction currently under investigation
4. Signal detection recommendations

Aim:

• to synthetise findings and outcome from other WP3 sub-projects
• Starting point is database survey

Scope:

• EudraVigilance, VigiBase
• National data sets: AEMPS, BFARM, DKMA, MHRA
• Company data sets: AZ, Bayer, Genzyme, GSK

Focus:

• Size (# reports) and breadth (# drugs and ADR terms)
• Types of reports (AEs or ADRs, Vaccines, Seriousness, ...)
• Additional information (presence of data elements available for stratification and sub-setting, e.g. demographics)
• Supporting systems (analytical methods, medical triages)
Work Package 4

Objectives:

• To assess the feasibility, efficiency and usefulness of modern methods of data collection including using web-based data collection and computerised, interactive voice responsive systems (IVRS) by telephone
• To pilot approaches between data sources
• To measure the acceptability of these methods and assess the transferability of data collection methods in different countries and for other conditions

Prospective study in pregnant women in four countries is under development:

• Denmark
• The Netherlands
• United-Kingdom
• Poland (tbc)
Study subject picks up a leaflet in a pharmacy or browses specific web sites to find out about the study in one of 4 countries.

Study subject enrolls for the web or phone (IVRS) method of data collection.

**Work Package 4: Patient workflow overview**

**Web**

n = 1200 per country

Study subject completes the surveys online.

**IVRS**

n = 200 per country

Study subject completes the surveys via an outbound reminder or by inbound call she initiates.

Final outcome survey is completed at the end of pregnancy.
Work Package 5

Objectives:

• To assess and test methodologies for the benefit-risk assessment of medicines

• To develop tools for the visualisation of benefits and risks of medicinal products

→ Individual and population-based decision making

→ Perspectives of patients, healthcare prescribers, regulatory agencies and drug manufacturers

→ From post-approval through lifecycle of products
Work Package 5

Review of methodologies and representations

- analysis and integration of different sources of evidence
- elicitation of preference values and uncertainties
- visual methods of benefit-risk representation

Selection of candidate methodologies

- criteria will include ability to assist decision-making by patients and prescribers

Choice and implementation of case studies

Visualisation technologies will be tested and developed if needed

Set of recommendations
Work Package 6

Objective:
To validate and test the feasibility of methods developed in PROTECT to other data sources and population groups.
Work Package 6

1. To apply tools and methods developed in WP2

   • Feasibility in other types of data sources, e.g. disease registries
   • Elements to be considered for the choice of methods and data sources:
     \- usefulness
     \- potentiality for high quality studies
     \- impact of results
   • Description of data source characteristics
   • Recommendations regarding specific data elements and methods to be included

2. To evaluate signals detected by WP3 in other types of data sources

3. Testing of tools developed by WP4 and WP5, as defined at a later stage.
Work Package 7

Objective:
To identify training opportunities and support training programmes to disseminate the results achieved in PROTECT.
**Work Package 7**

1. Identify PROTECT deliverables that could be introduced in undergraduate and continuous education, and liaise with IMI pharmacovigilance and pharmacoepidemiology training consortium (EU2P)

2. Identify best tools for disseminating the project results and increasing expertise outside the consortium

3. Identify training opportunities from within the consortium that may be offered to consortium partners and possibly to PhD students (eg. EU2P)
